12.00 Colour-coded cleaning utilities

Colour-coded cleaning tools, such as mops, brushes, and cloths, prevent cross-contamination and maintain hygiene in various facility areas.

For example, in the dairy, each coloured tool for a specific area, such as red for high-risk areas such as toilets and washrooms, blue for general sites such as offices and corridors, and green for food preparation areas such as kitchens and dairy processing areas. This system helps prevent the spread of bacteria and reduces the risk of contamination, crucial in producing safe and high-quality food products.

Using colour-coded cleaning tools is a simple and effective way to maintain hygiene and prevent cross-contamination, and it's becoming increasingly popular in various industries, including the dairy sector. By implementing a colour-coded cleaning system, Mejeriet can help ensure that your dairy products are clean and hygienic, which can help build customer trust and loyalty.
